TRUSTPORT

TRAIN THE CHAIN

Trustport: a cyber crisis simulation in a world port, where every role in the chain sees only part of the picture.

WHAT IT IS

- A serious simulation game for the port chain: different organizations, one incident.
- Each player gets their own briefing on their phone; a large shared screen shows what the chain does together.
- Communication = key. Talking is never required, but without it you won't get good results.
- After each round, the debrief shows what every link in the chain did, and what would have worked better.
- From a small group to a room of a hundred players. Sessions are anonymous: no names or personal data are stored.

THREE WAYS TO JOIN

Play along

Join a test session with your team or your chain partners, and help shape the scenarios.

Contribute knowledge

Bring in an incident, a case or your expertise. We turn it into a scenario that a chain can play.

Build with us

Game and simulation developers co-develop the platform with us, together with students from the GameLab.

NEXT STEP Interested? Mail us, and we will plan a conversation or a session.
